CDNA Library Preparation: M.B. Soares Lab Clone distribution:

Researchers may obtain BMAP cDNA clones from RESEARCH GENETICS. It

should be noted that Bento Soares is generating a small number of

additional specialized non-redundant arrays of EMAP cDNAs whose

availability will be considered under appropriate and limited

Max Planck Institut Fuer Molekulare Genetik
Ihnestrasse 73, Berlin, 14195 Germany
The cDNA libraries ICREp 522 and 523 were normalized with
oligonucleotide fingerprinting, resulting in a unique subset
5376 cDNA clones.

/note="Vector: p7773D-Pac (Pharmacia) with a modified
polylinker; 1st strand cDNA was prepared from mammary
gland tissue from a lactating female, and was then primed
with a Not I - oligo(dT) primer. Double-stranded cDNA was
ligated to Eco RI adaptors (Pharmacia), digested with Not
I and cloned into the Not I and Eco RI sites of the
modified pT7T3 vector. Library is normalized. Library
was constructed by Bento Soares and M. Fatima Bonaldo. "

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                2 1/USPTO spool

GENERAL INFORMATION:

APPLICANT: HAYSTEAD, TIMOTHY A

TITLE OF INVENTION: SMOOTH MUSCLE MYOSIN PHOSPHATASE ASSOCIATED KINASE

FILE REFERENCE: 1579-647

CURRENT APPLICATION NUMBER: US/10/083,641A

CURRENT APPLICATION NUMBER: 60/271,436

PRIOR FILING DATE: 2001-02-27

NUMBER OF SEQ ID NOS: 17

SOFTWARE: Patentin Ver. 2.1

SEQ ID NO 6

LENGTH: 1093

TYPE: DNA

ORGANISM: Artificial Sequence

FEATURE:

OTHER INFORMATION: Description of Artificial Sequence: Putative nucleotide
